The Doctoral Program in Environmental Science & Management  
and MSU Sustainability Seminar Series Present:

## How Can Collaborative Engagement Improve Water Quality? An On-the-Ground Perspective from the Musconetcong River

WHEN: May 10th, 3:45 pm WHERE: [Online via Zoom](#)

**Alan R. Hunt, Ph.D.**

**Musconetcong Watershed Association**

Alan is the Director of Policy and Grants at the Musconetcong Watershed Association, and lives along the Musconetcong River on his family's farm. He earned a B.S. in Environmental Studies from Bates College in 2003, a Master in Environmental Management from Duke University in 2005, was a Fulbright Scholar in 2010-2011, and earned his doctorate in Rural Development at Newcastle University, England.

Partnerships are instrumental to improving water quality, especially difficult challenges like addressing non-point source pollution. Hear how over a thirty year timespan local residents worked to improve water quality, first through protecting the Musconetcong River as a National Wild and Scenic River, and then using that status to work collaboratively with federal and state agencies, non-governmental organizations, and local land owners to reduce pollution from farms and remove abandoned dams.
