Winter session offerings slashed

By Ernest McCullough

The number of courses that will be offered for the 1983 winter session has been cut by 40 percent, as compared to last year. Dr. Curtis Jackson, director of special programs, said the budget for the winter session last year was between $38,000 and $39,000, and accommodated 1,200 students.

This year, he said, only $30,000 is available in the budget and only 750 to 800 students will be able to attend winter session classes. He added that the number of fall '82 and spring '83 class offerings have been reduced.

Jackson said that Trenton sets up the guidelines for the academic allocations and that the school administration has no recourse but to stay within their financial structures.

The limited number of course offerings for the 1983 winter session has made it necessary to alter the registration procedure. According to Marshall Butler, college registrar, an in-person registration will be conducted instead of the previous mail registration.

Students planning to register should pick up a course request form at the Office of the Registrar in College Hall. Upon receipt of their form, students will be assigned a priority time in which to register for their course.

See course list on p.4

Students may pick up forms between October 13 and 26, during which time they can also secure advisor approval and plan for the payment.

On October 29 an in-person registration will be conducted at the Student Center in accordance with the assigned priority. Butler said that registration assistance is limited to the capacity established for each course, adding that it is possible that all students may not be accommodated; therefore, students should plan accordingly as they develop their spring course schedule.

Board to vote on plan report tonight

By Patricia Winters

Tonight at 7:30 in Kops Lounge, Russ Hall, the Board of Trustees will vote on the Phase III Report of the Master Plan of MSC for the 1980-1985 school years.

"The master plan is a 58-page plan of Montclair State College setting all goals and objectives up to the year 1985," said Laura Pedalino, student representative to the Board of Trustees.

The introduction to the plan was written by Roland Garrett, vice president for academic affairs and chairman for the college planning committee.

These plans deal with access to the college. This involves student financial aid, exceptional educational opportunities, Adult Continuing Education and Second Careers Program. The expansion and improvement of the programs are also discussed in length.

In the master plan such programs as basic skills testing, academic program quality, graduate programs, vocational education, and health professions education are discussed.

Research and scholarships, public and urban services, resources, and Affirmative Action are other subjects included in the plan. According to the report, priorities have been outlined thoroughly, but there is also enough flexibility in the plan to allow for change.

According to Pedalino, phase III was brought up at last month's meeting. The plan would have been voted on then, but Pedalino asked that the board reconsider voting because no students were given the chance to see the plan and submit input. The board agreed to give Pedalino one month to inform the students and elicit student reaction.

After the program was reviewed by students and the SGA, Pedalino said "Everyone likes it. No one has any problem with it. I am grateful to the board for giving us time to review the master plan."

WPC students start brawl outside Bohn

By Peter Stankov

An incident occurred at Bohn Hall on September 25 in which four men identified as William Paterson College students got into a brawl with several MSC students.

Tullio Nieman, director of Bohn Hall, said it was the worst incident he has encountered at MSC since he took over last March.

The campus police arrived and broke up the disturbance. Guidi said the WPC students were even abusive to the police. She added that neither she nor any of the other MSC students were going to press charges.

Nieman said, "Most of our problems are caused by outsiders—people who don't live here at Bohn Hall. They don't care because they don't go to this school, so they cause trouble and vandalism," he said.

Nieman said gaining access to Bohn Hall is tough. "Everybody going in must show a tag to the desk assistant to prove they live here. All guests must be signed in by a host. The guests are issued visitor tags which must be worn all the time while in the building. In addition guests must be escorted at all times by their host," he said. "The person who signs for the guests is held accountable for their actions," he said.

Careers that make cents to get into

By Seshi Dharmapri

According to an article by Jon Sargent, "The college graduates during the 80s will be just as competitive as it was in the 70s." One reason for this is that college students are part of the baby boom generation. Another reason is the slowdown of economic growth, which has affected many large industries that are main sources of jobs for college students.

Depending on economic growth and the demand for college graduate occupations, between 12 and 13 million workers are expected to be needed during the 1980s, Sargent reported. Sixty-seven percent more workers are expected to be needed in professional and technical occupations such as nurses, home health aides, physical and occupational therapists, and administrative sciences, especially in the technical and financial area. Retail and non-RTP sales workers will also be needed.

By 1990 the age group between 25 and 44 will be larger. The age group between 16 and 24 will be smaller. This means that competition for new graduates will not be as tough.

According to the Bureau of Labor Statistics some jobs that will expand in the next ten years include medical practitioners such as nurses, home health aides, physical and occupational administrators, dental assistants, and hospital clerks. This group includes scientists, engineers, business managers, secretaries, receptionists, retail sales workers, and programmers and analysts.

Some areas of employment that will be limited are agriculture and teaching in colleges. Openings for physicians will be limited in the next ten years, especially in certain areas. The job market for air pilots will be tight, and some clerical jobs, such as file clerk, will be replaced with computers by 1990.

Opportunities for jobs depend on supply and demand in the job market, according to Peter Prichard of Career Services. He said that when people hear of a demand in a certain area, everyone goes into it. As a result there is a demand that careers will not be as strong as before. Prichard pointed out that there was a strong demand for chemical engineers a few years ago. "So many people went into chemical engineering that now the need for chemical engineers is not as strong," he said.

Teaching was also considered a bad choice a few years ago. Since people avoided that career there is now a demand for teachers.

Prichard said that the choice of a career also depends on personality limitations. "People who go into a major looking for better opportunities should be able to do well in it, and like it, or they will have a low grade point average." Prichard advised that when choosing a career, students should look at their personal limitations, the job market, and the economy, but never just any one factor.

Blue collar jobs for electricians, plumbers and pipefitters, mechanics, and services of office machines, appliances and industrial machines will also expand.

Other opportunities will be in areas of finance insurance and real estate. Jobs in these areas will grow by 34 percent, or 1,600,000 new jobs, due to the expansion of banking and credit services.

Campus ticketing to begin

By Martin Farricker

The college police have begun widespread ticketing of cars not bearing valid parking decals, according to Elliot Mininberg, vice president of administration.

Until now, the police haven't issued tickets to cars without decals so, Mininberg said, the owners have had every opportunity to buy a sticker.

In the past, students often disregarded tickets issued for parking violations. However, Mininberg said, "It is our full intention to prohibit re-registration of anyone with outstanding campus tickets."

Every student who hasn't placed a valid decal on his car should do so immediately to avoid significant penalties, Mininberg said, "We do not want to implement this program with undue harshness," Mininberg said.

This past fall, purchasing parking decals was done in person instead of through the mail. Mininberg said that the result is that far fewer decals were issued this year than in previous years. This warrents a ticketing program with stricter enforcement to act as a deterrent to illegal parking on campus.

Parents are sandwiched between two generations

By Eileen Oleksak

What is the sandwich generation? To dispel any pre-conceived notions, it is not a cult of fast-food fanatics on the brink of a nutritional break-down. It is, however, a group of adults between the ages of approximately 30-60 who feel they are being "sandwiched in" by both a younger and older generation of family. Instead of a generation gap, what you have is a generation squeeze.

This was the topic of discussion last Wednesday as Dr. Richard Taubald, principle associate and project director of the Center of Adult Continuing Education at MSC, talked about this trend in interdependence.

In the midst of the "daily bread" crisis, Taubald said that the middle generation has the responsibility of both caring for aging parents and the thankless job of providing room, board, and live-in maid service for their children, who are mostly college graduates returning home because they can't afford to make it on their own. At a time when the mortgage is finally paid off and other financial demands have slackened, this middle generation group precipitously plans to live life to the fullest by doing things for themselves when, all at once, this two-fold form of dependency hits, he said.

The other side of the coin is that although the younger generation may not require as much attention as the older generation, they have been known to show face whenever dinner is being put on the table or whenever their wash has to be done.

The American society teaches that independence is a virtue, he said. The "sandwich generation" seems to support this ideal. "These findings show that liberation of the bread is their ultimate goal," Taubald said.

Contract misunderstanding cancels Utopia concert

By Jamie McHugh and Linda Welchenieder

The Utopia concert featuring Todd Rundgren which was tentatively scheduled for October 31 by Class One Concerts has been cancelled.

Neil Jacobson, executive producer of C1C, said that the concert had to be cancelled because Rundgren was scheduled to perform a concert at the Brendan Byrne Arena on October 30. According to the contract between WDHA, a Dover radio station which is promoting the Meadowlands concert, and Utopia's manager, ATI, Rundgren could not perform in this area for one month before or after his Meadowlands appearance. Therefore, if Todd Rundgren and Utopia performed at MSC on October 30, it would violate the contract between WDHA and Utopia's manager. Flashgroups, a concert booking agency which was hired by C1C to schedule the concert, overlooked this portion of the contract and only notified C1C of this discrepancy on Monday.

Mike Haller, treasurer of C1C said that WDHA offered C1C a block of 1,000 seats priced at $3.00 apiece for Utopia's Meadowlands performance as a consolation for the contract cancellation. "We refused the tickets because the purpose of C1C is to provide quality entertainment on campus, not off campus," said Haller.

Earlier this semester C1C was also forced to cancel the Gary U.S. Bonds concert because the contract was signed and approved too close to the date of the performance. "This wouldn't have left us any time to sell tickets for the show," said Jacobsen.

He added that C1C is "still considering having concerts sometime during the spring semester."

Joe Jackson, who was originally scheduled to perform on October 25, cannot perform at MSC because he will not be in the area at that time. However, C1C is planning to schedule Jackson sometime in December.

On November 15, the Gregg Allman Band is expected to appear as C1C's first production of the season.
News analysis:
Your input is vital

By Laura Pedalino

Are you aware of the current crisis and plans for response by the MSC Board of Trustees? Colleges and universities across the country are threatened by enrollment declines and budget reductions. These problems are serious for MSC. This will be one of the topics for discussion at tonight’s board of trustees meeting at 7:30 p.m. in Kops Lounge, Russ Hall.

The problem at MSC stems from a lack of clarity in the role and purpose of our college and underfunding Montclair in comparison with other state colleges in New Jersey. The MSC board of trustees would like to develop distinctive programs and goals which will take us beyond the current funding formula.

The following is a list of the courses being offered during the winter session:

- Selected Topics in Institutional Processes: Sociology of Development
- Study Abroad (Spanish/Italian)
- Developmental Math I—Computation
- Developmental Math II—Algebra
- Computers and Programming
- Energy, Society and E.A.R.
- Group Dynamics
- Food and Man
- Externship: Foods and Nutrition
- Home Maintenance and Repair
- Basic Automotive Mechanics
- Welding Technology
- Education of the Self through Physical Activity and Sports
- Skiting (Beginning)
- Seminar: Current Issues and Trends in Recreation & Leisure Services

During the next few months the college community is invited to review the problems that the college currently faces and recommend appropriate policy or program changes to the board of trustees. Time is short, so the board is asking for responses by December 15, 1982. You, the students of MSC, should participate during this critical moment in the history of our college.

I am interested in speaking with students who would like additional information, questions answered or suggestions concerning this matter. Call me at the SGA office at 893-4202 or write to me and address it to the SGA office, room 103, Student Center Annex at MSC. Your input can make the difference.

Job Listings & Career seminars

(A more complete listing of seminars and job openings is available in Career Services, Student Center Annex, Room 104).

Seminars (All held in Student Center Annex, Room 206 except where otherwise indicated)

- Resume Writing: Thurs., Oct. 14, 2-4 p.m.

Resume Clinic: Thurs., Oct. 21, 10-11 a.m. (Rm. 104)

- Interviewing I: Thurs., Oct. 14, 11 a.m.-1 p.m.

- Wed., Oct. 20, 10-12 noon

- Thurs., Oct. 21, 6-8 p.m.

- Mon., Oct. 25, 2-4 p.m.

- Interviewing II: Wed., Oct. 27, 11-12 noon

What Can You Do With Your Major?: Thurs., Oct. 21, 11-12 noon

- Job-Hunting Tactics: Tues., Oct. 19, 1-2 p.m.

- Full-Time Jobs
- Management Trainee: on-the-job training, $14,000 plus dep. on exp., Bloomfield listed 10/6

- Account Exec. Trainee: B.A./B.S. plus 6 mos.-2 yrs. sales exp., $10,000-13,000 plus comm. and benefits, W. Orange, listed 9/28

- Advertising-Marketing Coordinator: B.A./B.S. in marketing or advertising, salary open Totowa, NJ, listed 9/23

- Administrative Asst.: Self-starter with bookkeeping/accounting skills, Trenton, listed 9/28

Career corner

By Eileen Bruck

Beginning on November 1 and almost every day thereafter through mid-December, employers will send representative to the MSC Career Services office to interview January graduates for entry-level positions. This process is called recruitment.

Recruitment activities are a direct reflection of current job trends. Because of the poor state of the economy, many organizations who usually come to campus in the fall will not be doing so this year. Nevertheless, employers such as Arthur Andersen, Ethicon, Xerox, Hahne's, General Public Utilities, Automatic Data Processing, AT&T Long Lines, and Amerada Hess are scheduled to return. A sample of job titles which will be recruited for are programmer, sales representative, financial analyst, assistant buyer, staff auditor, management trainee, and customer service representative. Some of these employers seek a specific major, but others look for capable students with a keen interest in their industry or job title.

Employers representing social service agencies, publishing, and public relations, as well as those dealing with the environment, museums, the fine arts, and music rarely recruit on campus anywhere. The reason is that these organizations don’t usually hire cont. on p.5

New Members Meeting
Dr. LeMay assists in NASA research

By Mona Sehgal
Dr. Moira LeMay, assistant professor of psychology at MSC, was one of the 26 engineers who helped design an "interactive computer system" for the National Aeronautics and Space Administration. The project was carried out at the jet propulsion laboratory of the California Institute of Technology this past summer.

LeMay and 25 others were chosen from approximately 125 nationwide applicants. The MSC professor was one of the only two women and the only psychologist on the team of physicists and engineers. The program was sponsored by NASA, the Department of Energy, and The American Society of Engineering Education, which coordinates research programs for various government agencies like NASA.

This is the second time LeMay has worked under the ASEE sponsorship. In her first project she worked for the Air Force pilot training program via human factors engineering. Dr. LeMay, as a human factors engineer, researched the development of a more efficient computer used to receive data from satellites in space. "Such data is found to be 90 percent reliable, and we're still working on the reliability of the computers," LeMay said.

In order to create a more automated, precise monitor system, operators will be required to do more work, she said. LeMay measured workloads of the operators. She then predicted when the operators would be needed most by the computer, and when the computer would be most likely to make errors.

The work took in to account interactivity of human performance or the "human factor" with a machine. Thus, data could be fed into the computer and the computer could tell the operator what to do next. The computer and operator would alternate in their inputs and work together.

LeMay cited the Three Mile Island incident as an example of what can happen when the human factor is not accounted for. During the nuclear f Models, engineers were confused about their work loads, or other interactions between operators and computers when building and programming the mechanism, she said.

The research at the California Institute will be utilized at the deep space stations in Goldstone, California; Canberra, Australia; and Madrid, Spain. LeMay explained that each of these equidistant stations receives data from satellites that go beyond the orbit of the earth. In the past, the Pioneer and Voyager satellites provided the public with elaborate pictures of Mars, Jupiter and Saturn.

"The process of developing these informative and detailed photographs involves a computer which takes data from satellites and feeds it into another computer which presents the data. LeMay worked with the first of the two computers, or the monitor and control system. The project deadline is 1985 and will be employed for the Voyager journey to Uranus in 1986. LeMay received her degree in physics from Queens College and her doctorate from Penn State. She has been teaching at MSC for fourteen years and is presently the director of the Industrial Organization Program for graduate students and a graduate advisor.

As a teacher, LeMay does not often have the opportunity to see the end result of her work in a student. But, in the case of the summer project, LeMay hopes to go back to NASA next year. LeMay concluded, "Just being able to see the application of the work I initiated is a most rewarding experience for me!"
English tutors sought:

Updike's you needn't be

By Kathy Sorentini

The English department is now offering a student tutoring service for those interested in aiding other students, or those who need help with English.

The program, recently started by Dr. Naomi Liebler, needs talented knowledgeable English students who would like to teach writing skills while earning $4 per hour. Tutors must be skilled in English grammar and are required to submit writing samples to Liebler.

The Math department has had a similar program for some time run by the Math Club. The English department, however, is having problems collecting tutors as well as pupils. "I don't understand it," Liebler said. "I sent memos to all my colleagues asking who might be interested or to send students that need help. So far I have only two prospective tutors who have submitted writing samples and no pupils."

Liebler is not sure whether the lack of response is due to the students not caring about improving their writing skills or the faculty neglecting to inform students of the program.

Liebler said the program will serve two important functions. It will provide steady, supplementary assistance to students who need to improve their writing skills, and an opportunity for those with good skills to sharpen them through instructing others.

"Hopefully, the English Club, like the Math Club, will take over the service once it has been established," Liebler said. "It should be run by the students with professors as advisors, not supervisors. The tutors and pupils arrange their own meetings, we just make the matches," she said.

Liebler added that students should use the service as a way of long term teaching and not just for emergency help with papers and last-minute assignments.

"Tutoring is a good way to make a few extra dollars as well as get some practice in teaching," Liebler said. Anyone interested in the program should contact Liebler in Partridge Hall, Room 463.

By John DelGuercio

Two cars were stolen during the week of October 4 to October 10. The first which took place on October 6 was stolen while parked in lot 25, the second was stolen from lot 22 on October 7. In both incidents no arrests have been made and neither car has been recovered. However, a third car which previously was stolen from Piscataway, was found in lot 22 on October 7.

On October 4 someone broke into a car, which was parked in lot 17, and stole cassette tapes. On that same day a second car was broken into; this time the perpetrators took the car's battery. Again, in both cases the stolen items have not been recovered.

Life Hall also was entered on October 4, 8 personal property was stolen while left unattended by the owner. Freeman Hall was burglarized on that same day; one of the rooms was entered and personal property was stolen. On the following day, October 5, a clock was taken from Finley Hall. In all three cases no breakthroughs have occurred in the campus police's investigation.

While parked in Conrail lot an unattended car was vandalized on October 7. There are no suspects at this time.

Finally, five males entered Bohn Hall on October 9. They were not authorized to do so and the police were called. All five males were arrested for trespassing.

SELF HELP GROUPS

When people who have similar ideas or experiences get together and share them. Group members offer each other knowledge, support, strength, and hope. They have a little bit of courage, a sense of commitment, and a lot of caring.

Club is a sure bet to win place or show

By Janet Hirsch

A small group of students at MSC spend their evenings in Oldwick, New Jersey at Jack Benson's Brierwood Farms riding horses and learning the basics of hunter seat equitation. The MSC Riding Club, which started nine years ago, competes with inter-collegiate teams from such schools as C.W. Post, Pace University, Stonybrook University, and Fordham University.

The members all share a common love for horses and are riders of different abilities. "We try to help you learn about horses and how to ride them," said Janine Iannarelli, president of the club.

The members spend most of their time taking lessons and preparing themselves for upcoming horse shows. The club participates in local shows and regional competition.

MSC placed 27th out of 28 in its first regional show in 1974. When Jack Benson became the club's coach in 1975, MSC shot up to 7th place.

Jack Benson started riding horses when he was 29, and from 1974 through 1976 he was the New Jersey open jumper champion. This means that Benson and his horse placed the highest out of all other riders in New Jersey for three years in a row.

There are a few requirements that the members must meet before they can ride in a show. They must have a lesson once a week for their own safety, as well as to gain experience. The lessons given at Benson's stable cost $15 each, or ten lessons for $125. Since riding in shows can be costly, the riding club pays for all of the membership entry fees with the money they make from raffles and bake sales. This allows the members to afford their formal riding attire, which adds to the pageantry of the event.

In these shows the style of riding is called hunter seat equitation, a type of riding that developed in Europe. It is much different from Western riding, which most people are familiar with. The rider is judge on how well he or she can guide his horse through a series of walk, trot, and canter exercises. The riders also take their horses over many jumps, which vary in size.

A special breed of horse, known as a hunter, is used for these shows. This is usually over three years old and has been showing for quite some time. Good hunters cost $10,000 and up.

The highlight of the riding season is the regional championship. In order to qualify for the regionals, a rider must place very high in other events during the year. In the past, MSC has had several regional champions.

Anthony Carpinelli was the champion in 1978, and Joann Farrel was the champion in 1982. Andy Schenke, who was the regional champion in 1981, also won the national championship that same year.

Besides participating in shows given by other schools, MSC is looking forward to holding its 7th annual show at Benson's Brierwood Farms. "Montclair has the best show of any inter-collegiate team," Benson said.

The MSC riding club does more than show horses. MSC is the only college in the country to ride in the St. Patrick's Day Parade in New York City.

"Nothing can describe the feeling of riding down Fifth Avenue with all the crowds. Only a major win at a show can come close to that excitement," Iannarelli said.

The riding club has had many activities in the past, including hay rides and a trip to a dude ranch. In the future the club will be planning a trip to the National Horse Show at Madison Square Garden.

The officers of the club are Iannarelli, president; Anthony Carpinelli, captain; Lisa Menar, treasurer; and Julie Stevens, secretary. The Riding Club's faculty advisor is Gregory Clare, a professor in the economics department.
Better get involved

The decade ended more than ten years ago and members of its generation are fast approaching middle age, but the 60s and its counter-culture revolution did leave behind an important legacy: student rights in the decision-making process of government and college administration.

That legacy, however, is fading fast, a victim of long-term neglect and apathy. The rights that were fought so hard for are slipping from our grasp because few students think important enough to donate a little time to become involved.

This lack of involvement exists not only on campus but also in society. Our age group has the lowest percentage of registered voters as well as the lowest turnout on election day. Is it any wonder that the state and federal governments feel free to cut the budgets of any programs that affects us?

The board of trustees is faced with a major problem resulting from these cuts that our elected representatives felt obliged to inflict upon us. It is now up to the board, either live with these and possible future cuts, or to take a stand and fight for every dollar. It is becoming apparent that the board has chosen to do the latter despite the lack of support from the student community.

Much as they try, the board cannot—and should not—do it alone. They need and deserve our help.

At its monthly meeting tonight, the board is going to consider a resolution that concerns itself with the current financial crisis and possible plans to pare it. Any student that gives a damn about his or her education should attend the meeting. Those who cannot—or those that don't care—should at least call their legislator and voice their complaints about the higher education budget.

There will be, of course, those students who won't do even this much. They'll have excuses of course; too much homework, a part-time job, boyfriend, girlfriend, and on and on. These excuses—and that's dollar, it is becoming apparent that the board has chosen to do the latter despite the lack of support from the student community.

These same students, too busy to attend a board of trustees meeting, will probably be in the Rathskeller tonight. The same Rathskeller that may be forced to close this year or next because the legislature passed a bill to raise the drinking age, and everyone was too busy to do something about it.

Building glass houses

Press release found on News editor's desk:

In keeping with the unceasing effort to modernize and enhance the facilities of this college community the Student Government and its various Class One organizations have been relocated. The newly opened facility in which they will be housed will not only provide them with the latest in space utilization, convenience and economy, but also render them unsuscetible to a nuclear attack in the event of such an unlikely occurrence.

Yes, they've done it again. In their latest quest to spend student money on experimental avant garde architecture the College has come up with another winner. In fact over the last few years they have succeeded in undertaking several "college development" projects, all of which managed to fall flat.

First, the College decided to build a new dorm. Couldn't they have settled on a traditional dorm? No, they had to build a modern, fuel-efficient, money-saving unparalleled atrium dormitory that would solve the housing problem once and for all. The College said in the fall of 1980 that the new dorm may force housing prices up 15 percent. Instead the dorm's "efficiency" has so far brought on a 55-percent hike in housing fees, and weeks upon which residents have had to deal with no hot water, broken elevators, no heat, no air conditioning, and on and on. The only consolation the dorm has provided its haggled residents is winning the NJ Concrete Structure of the Year award. Some consolation.

Then there was the effort to save on electrical bills and modernize Partridge Hall by installing automatic light switches. A well-kept secret, one can only guess the price of installing movement sensors in the ceilings of each and every room in Partridge—sensors that were supposed to turn off lights in empty classrooms. Today, however, they arbitrarily shut off classroom lights even while a full class occupies a room. It doesn't take an electrician to tell you one wastes money by having the lights switched on and off every 16 minutes, never mind the student money wasted in installing a system like that, and finding it doesn't work.

Next the College decided to build a new athletic field. Could they settle on a traditional astroturf or cinder track? As you may have guessed the answer is no. (And why should they? If anything goes wrong they can always raise the athletic fees as well.) Sure enough, the college created a new chemical compound which soon afterward developed large bubbles, forcing them to have it torn up, and forcing the track teams and students to find another place to run for a year.

Now, as we return to classes again this fall, many of us have noted a bold new addition to the campus community. Burrowed adjacent to the Student Center is the new subterranean home of the SGA and company, the Student Center Annex.

Descending into its inner chambers, one is quick to observe that the facilities of this new college creation keep par with all their other recent creations. When designing it, the architect obviously had the inside of a broom closet in mind. Its sometimes unfinished concrete walls successfully create that "closed-in" look in each office. But most distressing is the overwhelming lack of windows (obviously, since the building is underground).

But the list of unique aspects of this building doesn't stop here. Exposed airducts, drains, wires, and even sewage pipes run helter-skelter overhead. The courtyard above the annex "crinkles" under one's feet (in some places broken tiles pivot up and down), and, isolated from the regular flow of student traffic, it is usually void of human life.

Where the many administrators and staff (and few token students) involved in planning these latest ventures of the College got their ideas, I haven't the foggiest notion. But one thing is clear, this seeming trend toward the new and unique seems to have backfired in every instance. The result in the long run will only be higher fees levied on students. In these time of inflation and rising educational costs, the prospect is not a very cheery one. Maybe the College should take the results of their latest ventures into account and consider more traditional and proven efficient methods of campus development.

But one must not look at the negative side of things. In the annex for example, rumors have it that the Psychology Club plans to use its labroom/hallways as a new maze for its white mice. And then, of course, there is the advantage for us, The Montclarion; if we ever wanted to become an underground paper, we certainly have the facilities.
The weekend of October 1 saw members of MSC's Students for Social Responsibility and a national student cc-'ference in Washington, D.C. The conference, entitled "Educating Ourselves for Peace: A National Student Conference on the Implications of a Nuclear Freeze," was sponsored by The National Education Association and the Student Alliance for an Immediate Freeze. SAIF is a coalition of nationally prominent student and youth groups which are working to coordinate the efforts for those working to halt the arms race through a freeze legislation.

The only nationally based coalition of student and youth groups on the freeze. The members of SAIF include: Americans for Democratic Action, Youth Caucuses, Democratic Socialists of America Youth Section, Student N SA, United States Student Association (of which MSC's student government has been a member) and the Young Democrats of America.

By attending this conference MSC has made itself known among the country's top schools and progressive student groups, and has also forged a reputation of having one of the leading student groups in the state of NJ embodied in the SFSR. In addition to the fact that MSC was the only state college at the conference (all others were universities or private schools), we were also the only school from NJ, and led the conference with the most participants of any school with six. Other schools which participated were American University, Amherst, Brown, Duke, Georgetown, George Washington U., Harvard, Radcliffe, Wellesley and Yale.

The purpose of this conference was to offer a chance for students to educate themselves on all the aspects and implications of a nuclear freeze. The weekend was divided into four general sessions: "Where the Arms Race is Now," "International Implications of a Freeze," "Domestic Implications of a Freeze," and "Where Do We Go From Here?" Each general session was followed by four workshops, which were repeated twice, on related topics. The workshops which were more specific and in depth gave the students a chance to meet in small groups and discuss each topic thoroughly with the workshop speakers. An example of one of the workshops was "Limited Nuclear War, Europe's Response," presented by the former secretary general of the Finnish Liberal Youth Party. In the 28 organizations provided speakers for this conference. Among them were Physicians for Social responsibility Ground Zero, Citizens for a SANE Nuclear Policy, Peace Links: Women Against Nuclear War, Center for National Security Studies, U.S. State Department, and the U.S. House of Representatives, just to name a few.

The high point of the weekend came during the first general session "Where the Arms is Now," which featured retired Rear Admiral U.S. Navy Gene LaRocque, founder and director of the Center for Defense Information, and Gregory Suchon from the U.S. State Department. After each speaker presented his views on the freeze movement, questions were accepted from the audience.
DON'T WAIT ANOTHER MINUTE!!!

COOPERATIVE EDUCATION has GREAT OPPORTUNITIES in:

* Peat, Marwick, Mitchell - Tax Assistant
* Social Security Administration - Service Rep.
* Channel 13 - Intern
* Midlantic Bank - Jr. Programmer
* Woodward-Clyde Associates - Electronics Technician Trainee
* Bristol Myers - Sales Rep.

and much, much more...
TIME IS RUNNING OUT!
MUST Register in OCTOBER.
Interviews take place in NOVEMBER.

MTS puts on a gem

By Harold Lowry

Over the doors of the Memorial Auditorium it reads Gemini—"Raucously Funny", and while Gemini on Broadway may have been raucously funny, the Major Theatre Series presentation, under the direction of Dr. Ramon Delgado, is more subdued and dramatic than previous productions. Gemini takes place in the backyard of the Geminiani and Weinberger families, an Italian father and son, and neighbors who are as close as any blood relatives.

The conflict arises when two of the Geminiani's son's friends from college literally drop in over the fence of his South Philadelphia, postage stamp back yard. Francis, the son, is disturbed because on the day before his twenty-first birthday, he is confused about his future, his friendships, and his sexuality.

Terry Burnett puts one hundred percent into the part of Francis. He shows us the internal conflict which torments the son. His characterization can be described as wonderful. Christopher Andrus gives the father's backslapping cont. on p. 14

By Michael Deverey

In a time when 10% unemployment is a fact of life and many Montclair students are finding it impossible to find part-time work, a couple of MSC students are causing quakes in the music industry.

"Quakes at Lima", not a weather report from Peru but a band consisting of five members (two of whom are MSC students), will be appearing at the Meadowbrook on Saturday night.

Bill Melo, the bands' guitarist, and Bill Bartlett, the vocalist, met each other while working at WMSC. Their first show was January 1, 1982 at the infamous Dirt Club. It was there where the band honed its sharp sound.

"I think savage is a good way to describe our music," Melo said. Although it may be savage, "Quakes at Lima" can be heard on five radio stations throughout the state and seen at such clubs as Hitsville, the Meadowbrook, and NY's Tramps. According to Melo, WFDU tabbed the single "Zombies" as song of the year.

The band is unofficially based in Montclair. Practices are held in an abandoned meat locker underneath the Chicken Basket. Even though the band has shown interest, they have yet to play on campus. "We were going to play at Spring Day but they brought the Simon Says guy instead," Melo said.

With a video in the works, and record companies showing some interest, "Quakes at Lima" seem to be on their way to success. "I am not dumb. I know the music business too well to drop out over it," Melo, a broadcasting major who has worked at MTV, said.

Although the band has undergone some personal changes, the core has remained Bartlett and Melo (who write most of the songs), Nick Ferro on drums, Charlie Camella on bass. This weekend's show at The Meadowbrook is a major step for this local band, which promises to make interesting use of the Meadowbrooks' video.

More Gemini

cont. from p.11

nature an intelligent and charming air. The character's concern and sympathy for his son are strongly present in Andrus' performance. The character of Judith, one of the more intelligent characters in fiction, is portrayed adequately by Linda Bray. Robert Murphy, as Judith's younger brother Randy, gives the most subtle and realistic performance of the play. The intensity of the scenes between Randy and Francis is only outdone by the excellence of their comic rapport. Laura Caraccioli shows poise as the neighbor Lucille, although Lucille would call it 'pwaahs'. Herschel, the asthmatic kid next door, often gets the best laughs, while his alcoholic hipshaking mother is the only character to seriously suffer from the director's attempt at toning down the play. Herschel and Bunny are played by Michael Monte and Michele Tauber. Since this review comes from seeing only the dress rehearsal, it is impossible to tell how much larger audience response will help fill out the comedy. The set design and lighting, done by John Figola neither assist nor hinder the director's search for realism. Dr. Delgado's humanizing of the play also neither assists nor hinders the drama. Gemini is a thought provoking and funny show. A sure hit. Gemini can be seen tonight through Saturday, with a matinee performance Friday afternoon.
**Tennis**

By Kathy Szorentlni

Undefeated Trenton State College routed the women’s tennis team last Thursday. 6-1. The only scorer for MSC was Gerry Masterson, who won in singles 6-2, 4-6, and 6-2.

In doubles, Masterson and D’anne Wagner went three tough sets of 7-6, 6-1, and 7-3 but lost.

Saturday the team went against East Stroudsburg State College and despite victories by Wagner, Mary Lynn DeFeo and the team of Wagner and Masterson, MSC lost 6-3.

Wagner improved her singles record to 4-3 and DeFeo to 5-3. The Indians’ record is now 4-4.

**Harriers**

By Kathy Szorentlni

Patty Leicher’s second place finish (19:19) led the women’s cross country team to a third place tie with Stonybrook University at the SUNY-Stonybrook Invitational Saturday. Wagner College won the meet with 37 points, Barnard College was second with 52 and MSC tied for third with Stonybrook with 64 points.

Pat Salmon, the next runner in for the Indians, placed twelfth in 20:33. Dana Caruso finished 22nd in 21:21. Sarah Solman was 40th in 22:35, and Amy McLaughlin taking 41st place just seven seconds behind Solman. Laura Frisch was 48th, and Barbara Pachella and Cyndy Maddox finished 56th and 62nd respectively.

**MSC to hold ‘special’ soccer clinic**

On Tuesday, October 19, the MSC physical education department and the New Jersey Special Olympics will sponsor their seventh annual soccer clinic for mentally retarded athletes of all ages.

Over 600 special athletes are expected to participate in the three-hour (9 a.m. to 12 p.m.) clinic on Sprague Field. A tournament will be staged at Brookdale Park in Montclair from 1 to 2:30 p.m.

More than 100 MSC students will serve as instructors, referees and trainers of the athletes who have already played soccer at their schools and institutions.

Dr. Leonard Lucenko, state coordinator for the soccer competitions, Dr. Joan Schleede, chairwoman of MSC’s physical education department and Tim Sullivan, state coordinator of the innovative sports skills instructional program, and all members of the physical education department, are coordinating the soccer clinic.

Special Olympics is an international program of physical fitness, sports training and athletic competition for mentally retarded children and adults. Created by the Joseph P. Kennedy Jr. Foundation, the program is operated by Special Olympics, Inc., a non-profit organization located in Washington, D.C.

The program is based on a grant from the U.S. Department of Education’s Bureau for Education for the Handicapped.

Persons eight years of age or older are eligible to participate in Special Olympics. Presently, more than one million special children and adults benefit from its programming.

Lucenko and the physical education department urge all students interested in becoming part of the Special Olympics soccer clinic to stop by the physical education office in Panzer Gym or call Dr. Lucenko (893-7094) or Dr. Schleede (893-5253).

CLASS I OF SGA
Montclairion/Thurs., Oct 14, 1982

The dictionary definition of the word hawk is, "Any various daytime birds of prey..." But the fans at MSC have a very different definition of the word and here's why: Pierce Fraunheim was attending varsity football camp two years ago as a freshman. The starting quarterback for MSC in 1981 was Scott Fischer, who thought Pierce was Pierce Fraunheim's last name, and kept inquiring "What is his first name?" to his teammates and friends.

After getting no reply Scott decided to name him Hawk. So the next time you're at an MSC football game and you hear crowds of fans yelling "Hawk" don't look for a bird of prey, look for number 84 on the football field because he probably just helped MSC get closer to victory.

Pierce was eight years old when he first played quarterback for Summerville's Pop Warner team. He then attended Immaculata, a parochial school, where he started as quarterback for the freshman football team which had its best season in the school's history. In his sophomore year Pierce started on the varsity special teams. Parochial all-county and all-area teams commended Pierce's performance in his junior year as a starting defensive back.

Pierce was also a "platoon" quarterback in his junior year, which led him to the prestigious position of starting quarterback for Immaculata's varsity football team. At the start of Pierces fifth game this impressive varsity quarterback had accumulated nine touchdown passes. In the second quarter of a game against Sommerville Pierce ran an option play, was tackled out of bounds, and suffered a broken collarbone. The injury ended his high school football career but his early season statistics were so impressive that colleges were still interested in recruiting him.

Pierce chose to attend MSC, majoring in business management and marketing. After living in Bohn Hall his freshman and sophomore years, he's made a change and is currently living in the Clave Road Apartments. Pierce's philosophy on living on campus is, "I'm very close with my family but we felt that going away to college is a large part of growing up. I believe meeting different people and being independent will help you in later years."

Eight is Enough depicts the Fraunheim family accurately. There's Pierce 20, Chris 18, Michael 16, Patti 15, Thersée 14, David 12, and Mom and Dad. Pierce's father started the football program at Immaculata 20 years ago and his efforts have proven successful. "My dad quietly motivated me in football. He was always interested but never yelled or pressured me to do well," Pierce said.

When Pierce was a freshman at MSC's varsity football camp he concentrated on learning the system and terminology of the team. He was the third string tight end but said, "I wasn't going to be content with what I had. I worked hard to show the coaches what I could do." Coach Fred Hill said, "Pierce and Mark Casale were backup quarterbacks. We saw Pierce could catch the ball and he jumped into the position of tight end due to injuries." Pierce has started since then as a tight end for MSC.
