Armed Robbery at La Quinta Alarms Student Residents

Kadimun Rizvi '13
Rajeev R pilli '13

After the armed robbery at LaQuinta Inn earlier this month, students living in the hotel are questioning the safety of the hall.

The Clifton Police Department arrested two men on Friday, Feb. 5 at around 12 a.m. for allegedly robbing two Ohio women at the Inn, according to Lieutenant Kieran Barrett of the University Police Department.

Some students said they did not know about the robbery and expressed mixed feelings on the safety of La Quinta.

“I think they should’ve told us about the robbery,” junior Emily Wolvin said. “I didn’t even know when it happened. I feel safe though.”

In the beginning of the month, there was a violent armed robbery which landed a woman in the hospital. No students were near where the robbery took place, nor were students involved.

We always lock our door at night.”

“I would feel safer living in a dorm,” senior Brianna Devlin said.

Commuters, How Deep Are Your Pockets? Students Share Problems with Financing for School

Danielle Masuccio '12
Melissa Souto '13
Annie Sotelo '13

When a typical tab at Café Dom runs $5.50 for a toasted cinnamon bagel with cream cheese and with the ever rising price of fluids, about $25 for regular gas, commuters should be aware of the money spent each week.

Students at Montclair State University are led to believe that commuting back and forth to school is cheaper than living on campus. However, with the price of gas, food and a parking pass, commuting may be getting close to the cost of room and board. It is essential that students break down the cost each semester, being that 80 percent of the school’s commutes.

But if a student spends $15 a day on food, it will cost $100 a month and $2,700 a year to eat. This student will spend nearly $4,000 on food and gas alone. The concept of commuting being cheap no longer seems to fit. “I spend at least $60 on gas a month,” sophomore Ratanjot Rekhi said.

Montclair State University’s most prominent crime on campus for the present school year is theft. Students residing on campus are not the only ones at risk, commuters are as well.

Lieutenant Kieran Barrett said the number of thefts reported has totaled to 254 in 2009-2010, resulting in an increase from last year. Twenty-six burglary reports, where an actual break-in has taken place, have also been reported.

Even though Barrett confirmed theft as the most occurring crime on campus, Lieutenant Barrett believes the theft of hangtags is “on the rise.”

Due to the fact that parking hangtags are the most popular thing to steal, commuters are vulnerable to theft as well.

A Voice for Latin America: Professor Travels to Guatemala to Film Radio Journalist and Her Journey in Helping Guatemalan Journalists

Beverly Peterson, a broad- casting professor at Mont- clar, went to a small village outside of a town in Guate- mala where Hurricane Stan devastated the village back in 2005. Mudslides washed out whole towns and people.

While Peterson was film- ing a testimony of a woman whose husband was killed during the mudslide, she noticed a whole line of people waiting to share their sto- ries.

While, Peterson’s documentary on Hurricane Stan was confirmed theft as the most occurring crime on campus.

Montclair State University

THEFT INCREASES

In the past 12 months, the state of thefts reported has totaled to 234.

Twenty-six burglary reports, where an actual break-in has taken place, have also been reported. Throughout lawsuits and other electronics are common items to be stolen, the most reported thefts have been parking hangtags.

Lieutenant Barrett believes the theft of hangtags is “on the rise.”

Due to the fact that parking hangtags are the most popular thing to steal, commuters are vulnerable to theft as well.

In the Feb. 4 issue, Stephanie Snow was the reporter for the article titled "Two-Way Road Helps Relieve Traffic."

In the Feb. 11 issue, William Mik (name was misreported to his article "Are You Getting Your Money’s Worth?"

On Feb. 16: A student reported the theft of his wallet while in Bohn Hall.

On Feb. 17: Michael Pesca was charged with aggravated assault, an act of domestic violence, while in Bohn Hall.

On Feb. 18: Eric Dotoli was charged with contempt of a court order and harassment while on the campus of Montclair State University.

On Feb. 18: A student reported the theft of her parking hangtag from her unsecured vehicle parked in Lot 28.

On Feb. 20: Criminal mischief damage to a door was discovered in Fenwick Hall.

On Feb. 20: MSUPD responded to a false public alarm in Bohn Hall.

On Feb. 21: Viraj Desai was charged with underage consumption of alcohol and disorderly conduct while in Blanton Hall.

On Feb. 22: A student reported being harassed via a public social networking site. Victim has refused to press criminal charges.

On Feb. 22: A student reported the theft of his laptop computer left unsecured in his residence in Bohn Hall.

On Feb. 22: A student reported the theft of his laptop computer and iPod from his residence in Bohn Hall.

On Feb. 23: John Macaluso and Dalton Dudash were charged with underage consumption of alcohol and disorderly conduct while in Bohn Hall.

Anyone who has information regarding these incidents is urged to call the police station from any campus phone at TIPS (8477). All calls are strictly confidential.
In an effort to fill the state’s $2.2 billion budget hole, Gov. Chris Christie’s recent series of proposed budget cuts to both NJ Transit and public higher education may potentially force Montclair State students to pay more out of pocket for public transportation and school fees.

The state subsidizes NJ Transit with $396 million during the current fiscal year. Christie proposes to withdraw $22.7 million from the budget. For commuters, this could mean fare increases of approximately 20 to 30 percent.

Diana Kettle, a junior who trains for her daily commute to campus, “I go from South Orange to Newark Broad Street and then to Montclair State University,” she said. “It’s not a long commute, just a headache sometimes with the transfer.”

Kettle’s student monthly pass is $45, compared to a regular monthly pass, which is $90. She used to buy a weekly pass, but noticed that she only came to campus three times a week last year. Still, she paid about $42 for tickets every month. Kettle, whose parents also use trains to commute to their jobs in New York City, worries about the efforts the proposed cuts will have on student pass prices.

“I hope the [student monthly pass] price doesn’t go up … It’s just another financial problem,” Kettle said.

Any Weber, a freshman who also takes the train from South Orange, worries that the state may take away subsidies. “A lot of people use the South Orange station, but since it’s a local stop, it might be considered less important than, say, New York Penn Station or Newark Broad Street, which are transfer stations,” Weber said. “I want to know how the state is deciding all of this.”

According to Dan Stessel, a spokesman for NJ Transit, service decisions are still pending. “No decisions have been made on the fare proposal as of yet in regard to survival,” he said. “We’re working on that now. We’ll have a detailed plan for public comment in the next two weeks or so.”

A: The university continuously explores new sources of revenue, including grants, fundraising and revenue generating programs.

Q: What could MSU expect to see in the next few years with funding for higher education?

A: Given the state’s difficult financial situation, the university has been anticipating that there would be cuts forthcoming this fiscal year. To manage the mid-year budget cut, the university will utilize savings from existing staff vacancies and will carefully evaluate the need to fill vacant positions, moving forward. All required faculty positions will continue to be filled. The university budget will allocate any unexpected cuts on students and faculty.

Q: Just as cuttingbacks are being announced across the nation, what is Montclair State’s plan for public comment in the next two weeks or so?

A: The university is currently working on a sound and future-oriented plan to meet the education needs of the people of New Jersey, Cole said.

We are cautiously optimistic. We believe the governor is sincere in his goal to raise public higher education as a policy priority. We are working closely with him, the lieutenant governor and the governor’s staff to reach that goal.

Q: What’s our share of the reduction?

A: Public higher education was cut $62.1 million, and the state colleges and universitites together were cut $17 million. MSU was cut by $2.7 million.

Q: What new sources of revenue will need to be implemented, if any?

A: The people of New Jersey,” Cole said. “This year, we’ll be able to use anyosing aid to make sure it does not affect student tuition rates this year,” Josephson said. President Cole emphasized Christie’s plan to make higher education in the state a priority.

“The higher education community needs to intensify its efforts to advocate for the importance of a sound and future-oriented plan to meet the higher education needs of the people of New Jersey,” Cole said.

David Josephson, director of the university’s budget and planning, said that tuition rates for this year are already set. “This year, we’ll be able to use anyosing aid to make sure it does not affect student tuition rates this year,” Josephson said.

President Susan Cole said that Montclair State University’s portion of the mid-year budget cut was approximately $2.7 million. A cut that she said, was “not wholly unanticipated.”

“We were prepared to address the cut with funds from salary savings that accrue when people retire or lose their jobs … and with funds that we set aside for just such a contingency,” Cole said. “Students should not see any effect from the immediate cut this year.”

Christie’s plan for public comment in the next two weeks or so.

Q: What is the chance for the montclair state university’s share of a sound and future-oriented plan to meet the higher education needs of the people of New Jersey, Cole said.

Christie previously said, “Our solution does not take one penny from the budget. Not one dime out of the line from existing staff vacancies and will carefully evaluate the need to fill vacant positions, moving forward. All required faculty positions will continue to be filled. The university budget will allocate any unexpected cuts on students and faculty.

Q: What is the chance for the Montclair State University’s mid-year budget cut was approximately $2.7 million.

The state subsidizes NJ Transit with $396 million during the current fiscal year. Christie proposes to withdraw $22.7 million from the budget. For commuters, this could mean fare increases of approximately 20 to 30 percent.

According to Dan Stessel, a spokesman for NJ Transit, service decisions are still pending. “No decisions have been made on the fare proposal as of yet in regard to survival,” he said. “We’re working on that now. We’ll have a detailed plan for public comment in the next two weeks or so.”

A: The university continuously explores new sources of revenue, including grants, fundraising and revenue generating programs.

Q: What is the chance for the school’s tuition to increase?

A: Tuition will not be increased in the current academic year. For next year, we not yet know what level of support we will receive from the state. The university will hold a tuition hearing on campus in April, and students will be able to participate in the hearing to express their views.

Q: What could MSU expect to see in the next few years with funding for higher education?

A: Given the state’s difficult financial situation, the university has been anticipating that there would be cuts forthcoming this fiscal year. To manage the mid-year budget cut, the university will utilize savings from existing staff vacancies and will carefully evaluate the need to fill vacant positions, moving forward. every week and about $10-12 on food a day," senior Chris Stroud said. Stroud will spend $240 a month on gas. It will cost nearly $2,160 just to get back and forth to class Monday through Friday during a nine-month academic year.

"I really do feel that it is important for the school to help students learn how to budget their commut- ing expenses. More students need to know how much it will cost to com- muter than how much it costs to live on campus," MSU graduate Ashley Davidson said. "I commuted for five years to Montclair and ended up having to take out a loan. Financial planning is something students really need to be aware of.

The prices for food are determined annually on Aug. 1 by a contract, produced by the Bureau of Labor and Statistics, involving Montclair State University and Sodexo. It is tied to the Consumer Pricing Index (CPI) and Producer Pricing Index (PPI).

Since 2003, an average price increase for food was 2.9 percent, decided by CPI/PPI. However, for two years out of the past seven, the prices remained grounded.

"This was the decision of MSU while CPI/PPI was at 3.5 percent. The only time the prices of the Red Hawk Diner and catering rose was the summer of 2008.

Prices are expensive because they are competitively priced and simply continue to increase. "It’s really not possible (to lower the prices)," Director of Auxiliary Services Andrew Pignataro said, "The price of food, utilities, gas, oil, paper, equipment, labor, health care, etc., go up every day. The food prices are expensive because they are competitively priced, and the price of food, utilities, gas, oil, paper equipment, labor and health care simply continue to increase."

"Students and faculty may opt to buy the more expensive pass, which is $340, to park at the Red Hawk Deck on campus to secure a parking spot daily."

"I really don’t understand how I am a commuter at school, and it costs me $340 to park. I think it’s ridicu- lous that the university changes that much, considering this is a commuter school," senior Rachel Wall said.

"I really don’t understand how I am a commuter at school, and it costs me $340 to park. I think it’s ridicu- lous that the university changes that much, considering this is a commuter school," senior Rachel Wall said.

"I really don’t understand how I am a commuter at school, and it costs me $340 to park. I think it’s ridicu- lous that the university changes that much, considering this is a commuter school," senior Rachel Wall said.

"I really don’t understand how I am a commuter at school, and it costs me $340 to park. I think it’s ridicu- lous that the university changes that much, considering this is a commuter school," senior Rachel Wall said.

Though it seems like the parking pass has some bad reviews, freshman Aurann Turner stated the positive side of the subject, "I think it is bet- ter to have a parking pass to be able to come and go if you have a class ev- ery day rather than spending $4 go- ing in and out of the parking deck."

With the economy continuing its downward spiral, it is important for students to learn how to budget and where they can save money. Most students are still struggling to figure out how they can pay for classes within other bills. In order to keep students ahead, just as the university plans to do academically, financial knowledge is becoming a greater need to the students.

However, not all students are suffering financially. "I believe that MSU is still an affordable school. I take my car, so it’s cool. MSU is reasonable and affordable, unless it’s the books," sophomore John O’Reilly said.

"I don’t spend as much. I became more careful with it as I matured," senior Chris Kopitar, a commuter, said prices for him vary every day,

"Simple things like bringing lunch to school, or waking up 10 minutes earlier to make break- fast really add up. Seventy-five dollars per week on food can be reduced to $25 per week by only buying a snack or drink on cam- pus. Take time out to look at a bus schedule. I commute back and forth to the city by bus everyday, because it saves me hundreds of dollars a month on gas, parking and tolls."

Loose Tiles By Student Center Planned to Be Fixed This Year

The tiles above the Student Center Annex will be fixed during the summer of this year, according to Vice President of Univer- sity Facilities Greg Bressler.

Bressler said he has not heard any complaints concerning the loose tiles. While the the budget was being put together for this year, the project to fix the tiles was included, he said. This design for it are almost completed. Students have noticed while walking from the shuttle bus stop by the Red Hawk Diner to the handicap entrance of the Student Center that some tiles were loose as they walked over them. Sophomore Tracy Young said she tripped while walking on the loose tiles.

"Some of them move up when you walk on them, and I tripped several times coming that way," she said. "They were like that last year too. It’s a big safety hazard."
The person at the front desk called the Clifton Police Department when a gun shot was heard in the hotel.

The new building will "make the university take a part of the community," according to Lieutenant Kieran Barrett.

Some students said they enjoy living at the La Quinta because of the services they receive, but others would feel safer living on campus.

The new Police Department safety building is currently in the works as a new addition to campus. Plans will not be set until a definite location has been chosen.

According to the map on the Capital Master Plan, the tentative location of the new building is located near the current maintenance building.

A new safety building has not been built since 1993, so the main change of the building is to expand. There has been an increase of thefts on campus from many of the residence halls.

Senior Kristin Jordan added that the hotel should be constructed first in order to build the public safety building in that location.

La Quinta is currently looking at the option of renovating a portion of the campus building.

On Friday, April 8, a stabbing incident occurred at the La Quinta Hotel when a fight broke out during a party in one of the rooms.

"I don't see security as much as I used to, like when the cars were being stolen. I see them do like one round the most and then they go chill in the lobby," Arena said.

Junior Stephanie Alkens said she feels the area is bad to have housing and that the hotel is currently in the works as a new building called hotel security and Clifton police.

The 23-year-old woman was taken to a local hospital with cuts and bruises.

The 21-year-old suspect was taken to a local hospital with cuts. The Clifton Police Department is conducting the investigation.

Barrett said that the responding officers were very effective and that the one man as he left the room and found another man.

The men took the women's pocketbooks and cash. The Clifton Police Department should also patrol La Quinta.

"I don't see security as much as I used to, like when the cars were being stolen. I see them do like one round the most and then they go chill in the lobby," Arena said.

Junior Stephanie Alkens said she feels the area is bad to have housing in because of how heavy Clifton can be.

The new building will "make the university take a part of the community," according to Lieutenant Kieran Barrett.

The current location of Montclair State’s safety building, the Red Hawk Dock in the front of the campus, is very inaccessible. It is on the complete opposite side of campus from many of the residence halls.

A new safety building has not been built since 1993, so the main change of the building is to expand. There has been an increase of officers working there, and the evolution of technology has also taken a toll.

When Lieutenant Barrett first started working for MSUPD 12 years ago, there were only eight officers; there are now 32 officers.

the dust contained a fine mix of steel, glass, heavy metals, asbestosis, ash and many known chemical carcinogens. Respiratory symptoms, marked by chronic coughing and decreased lung function, emerged and persisted in a large proportion of the rescue workers exposed. These symptoms came to be known as WTC-COUGH Syndrome. By 2006, published studies reported that a high percentage of recovery workers had suffered high rates of respiratory abnormalities. Dr. Ann Marie DiLorenzo has a professor of Biology at Montclair State University for almost 30 years. Since the 1990s, her research interests have centered around the in vitro (grown in a test tube) culturing of animal cells. Today, she specializes in studying the effects of induced stress on each cell. Prior research efforts have included monitoring the effects of chemicals on animal cell tissues. In 2007, Dr. DiLorenzo attended a lecture given by Dr. Paul Lioy of Rutgers University on the chemical composition of WTC dust. Given her experience working with heavy metals, Dr. DiLorenzo took advantage of the opportunity to study such a unique amalgamation of toxins. After sifting through the available data from Dr. Lioy, she went to work with a team of undergraduate and graduate students to study the effects of the WTC dust on human lung tissue. The group focused their effort on the characterization of the dust that settled at the site, it was essentially in vitro lung cultures, explains DiLorenzo. The problems with WTC dust have been the lung issues that we're hearing about; the firemen and the first responders who were exposed. So that's why we started looking at human lung cultures," explains DiLorenzo. One of eight students involved with the research and lead author of the paper the group would eventually publish was then graduate student Constantine "Zoe" Lambroussis. "If you look at what is actually physically in the WTC dust, you will have a whole slew of heavy metals. So any of the heavy metals we were already looking at in our [other cell culture research], you can find at some degree within WTC dust," Lambroussis said.

The group focused their efforts on two responses of lung tissue to exposure of the dust. Cell proliferation rates (replication rates) and rates of apoptosis (naturally occurring cell death) were measured at different concentrations of dust exposure. Upon analysis of the data, the trends were clear. With increasing concentrations of WTC dust exposure, the lung cells reproduced at a significantly lower rate and died off at a significantly quicker rate. As a control measure, cells were also exposed to different concentrations of household dust and gypsym (dry wall). The rates of apoptosis were measured for these two substances as well and they did not have nearly the same detrimental effect on lung tissue that the WTC dust did. Furthermore, the proliferation rate of WTC dust was compared to both household dust and gyspsum and found to be comparable, suggesting that it was the actual chemical composition of WTC dust that was responsible for the declines in cell health. The group concluded that exposure to the WTC dust has a negative effect on lung cell viability. They think that the various chemicals contained in the dust have mutagenic properties that cause damage to the DNA of the cells. Such drastic decreases of cell viability in a human body would likely result in decreased lung function, such as that experienced by many of the recovery workers. The group's work was published in a 2009 edition of the Online Journal of Biological Sciences. A number of students in Dr. DiLorenzo's lab are continuing to do research using in vitro culturing techniques. As a long-time teacher, I don't want students depending on me. I want them to be able to work as a team. And as you can see, we have a team that worked on the project and is continuing," said DiLorenzo.

Dr. Lioy, who served as a catalyst for the work done at MSU, has been recognized as an authority on the WTC dust and is set to publish a popular-science book on the subject in the near future. He thinks that work done at Dr. DiLorenzo's lab is important since it will contribute to a body of research that focuses on the effects of more than one contaminant at a time. "The discipline of toxicology has been provided a wake-up call with the WTC event and is fully recognizes the interplay of substances in the dust. WTC dust and is a team that worked on the project. And as you can see, we have a team that worked on the project and is continuing," said DiLorenzo.

When the World Trade Center towers collapsed on Sept. 11, 2001, and thousands of civilians fled from downtown New York, a steady stream of brave men and women made their way against the tide of evacuation towards Ground Zero. First responders, construction workers and volunteers gathered at the site of the attacks to aid in the effort of search and recovery. The rescue effort commenced at a feverish pace, with recovery workers laboring around the clock for days and weeks at a time. Personal safety was an afterthought at best. But as the fires embersed below and the dust continued to settle from above, hope waned. Eventually, the reality set in that no more survivors would be pulled from the wreckage. What should have been an opportunity for the recovery workers to catch their breath was anything but. Almost immediately, it became apparent that the nearcelegance of smoke and particulate matter at Ground Zero was having an adverse effect on the health of the recovery workers. According to a 2002 study of workers. According to a 2002 study of the New York Institute of Technology, the characterization of the dust that settled at the site, it was essentially toxic brev of alderized and combusted material. Among numerous other materials, the dust contained a fine mixture of steel, glass, heavy metals, asbestos, ash and many known chemical carcinogens. Respiratory symptoms, marked by chronic coughing and decreased lung function, emerged and persisted in a large proportion of the rescue workers exposed. Q: How do you deal with the stress of exams?

Sincerely, Stressed Out

Vanessa Hargreaves
Sports Editor

Originally, I thought I may not be able to do anything to deal with how to deal with the pressure of those exams. I thought the only way I could deal with the pressure was by drinking a lot of tea or by sleeping late after a very late night studying. But, I was wrong. I found that a lot of the twenties is about not letting anything stress you out.

1. Calf stretch.

This is the most important rule of all. Instead of studying in the confines of your own room or house, try to get around. I find that one of the best places to study is in the bath. It may sound weird or somewhat disgusting, but the environment is very comfortable. You'll warm and relax with your feet up in soapy clean water. What's not to like? Plus, a relaxed body means a relaxed brain, making route memorization a bit easier.

2. Hamstring stretch.

For me, Facebook is definitely an issue. As a social network it's great; however, I find myself wasting so much time looking at pointless pictures and leaving comments. If I'm studying and have the computer in front of me, I know I'm going to be distracted. So if you find that to be an issue, ditch the computer for a couple hours. For me, Facebook is definitely an issue. As a social network it's great; however, I find myself wasting so much time looking at pointless pictures and leaving comments.

3. Multi-task ... in a good way:

One of the best things you can do in a limited amount of space. These stretches will help loosen muscles in your legs, arms and back. You all need a bed, a desk and a chair to join me in this awesome stretch fest. Let's start out by getting on our beds, spreading our legs out and leaning over them, grasping your toes. Stretch as far as you can, and then, cup your feet gently for a nice deep inhale. Then exhale, stretching over your legs once more, getting deeper into the stretch.

4. Bridge stretch.

I find that I remember funny things more than I remember boring things. Sound about right? When I was in fourth grade, I did this with the state capitals and I knew most of them today. I believe I will continue my dorm tips at themontclarion.org. Next week’s dorm segment and don’t hesitate to turn those fears into cheers:

Here are a few things that I do before all. Instead of studying in the library, and others don’t even know where the library is. Whatever the case, figure out what is right for you.

1. Find a zone:

If I think I might have the time. Even if I’m going on dorm — the bridge! Some of you might have discovered that is perfect for any twist is very good. Pretty simple while adding or feel that constant pressure to keep those facts in your head. And for a bit), doing this is a great way to keep studying in your head, even if it is your only study time, at least you can tell yourself you tried. You heard it there! These are the ways I take mental breaks from my studies, and so far, so good, just remember the number one rule. Try to organize your time, and you will be fine.

Now, get out of bed and stand beside it. Gently lift one leg. Place it on top of your bed and lean over that leg. Place your opposite arm in an arc position. Hold for 30 seconds and switch legs.

This stretch reminds me of being a ballerina, lifting your leg over your head and extending it out your legs. This is great. Pretty simple while stretching your body and obliques as well.

Continuing with the use of your arm, remain beside the bed and do a circle stretch using the legs of the bed. With one foot at a time, prop it up against the leg of the bed on an angle and lean with your body, putting pressure on that leg. You will feel a burn in your calf, which will also help prevent injuries such as shin splints when you do your workout.

A Voice for Latin America

Beverly Peterson

There’s a little park and a huge speaker, and everyone [would] hear and everyone sat and listened to these stories while they were waiting in line,” Peterson said. “This showed how community radio is so important, and how much power a medium in that position,” Peterson recalled. “In a time when they are in need of a flow of information and everyone sat and listened to these stories while they were waiting in line,” Peterson said. “This was the sentiment that several years ago who came in to work, not with the skills, but desire to be a journalist.”

Peterson said her documentary in Guatemala, which has a working title of Gracia Vida, is representative of the inherent danger all journalists face covering human rights, politics and corruption throughout Latin America. Peterson added that one of the unique aspects of this project is that it shows the importance and impact of radio, one of the earliest forms of broadcasting, in remote areas desperately in need of a flow of information to and from the outside world.

“Just as a local television studio located in the family’s garage is a powerful reminder to young people entering the field of broadcasting, that the power of a media message is far more critical than the cost of the equipment,” Peterson said. “I continually reminded the workshop participants of this when they admired my High Definition camera, while I was awed by their courage in risking their own personal safety to speak out openly about local politics and corruption.”

With being there over 20 different indigenous dialects in Guatemala, Martin said radio remains the most powerful mass medium in the region, especially in rural areas. “Many people are either illiterate, or monolingual in their indigenous language. Therefore, this is the medium that not only reaches the far flung villages, but speaks to them in their language, and about issues that are important to them,” she said, in an e-mail response. “It is local, immediate and everyone can understand or speak to their needs and concerns.”

Peterson said the stories and issues covered by rural journalists are now included in the National newspaper, in print and on radio. “The Internet has been instrumen- tal in helping indigenous people entering the field of broadcasting, in remote areas desperate in need of a flow of information to and from the outside world,” Peterson said. “This was the sentiment that several years ago who came in to work, not with the skills, but desire to be a journalist.”

Have you ever wondered how dumplings were made? How about the history behind them? Well, they are easy to make and have a fun history behind them. Chinglish University and Pumphus Xi of Don- ghus brought together the history and of making these delicious little dumplings in the workshop The Story Behind Chinese Dumplings. The first dumplings in China were made 1,300 years ago. Made with flour, salt and water, plus all the ingredients, the dumpling became a New Year’s tradition. They say that the more dumplings you eat on New Year’s Day, the more prosper- ous you will be in the future year. This tradition brought together families from all over China. The family members would make dumplings early in the year while preparing the dumpling, it’s easy to make the dumpling in China. During the workshops, the lump- ings were compared to the American turkey on Thanksgiving. The food might be different, but the message was the same, family is a strong bond that is kept together by tradition. The tradition brought together many spectators, selling out within two days before the tickets sold. Not only were the stu- dents of Montclair State University in- terested in this Chinese tradition, but the event was open to the public as well. Attendees were able to bring dumplings made in front of them by Food Manage- ment students. You can go online to the Montclair State University thomson- clarian.org to get all of the recipes discussed during the lecture. Thank you to the visiting scholars who came all the way from China to teach us about their delicious dumplings.

Ingredients for pork and shrimp filling:
• 1 cup water
• 1/2 teaspoon salt (optional)
• 1 1/2 cups of cold water

Ingredients for pork and shrimp filling:
• 1 cup water
• 1/2 teaspoon salt (optional)
• 1 1/2 cups of cold water

Procedure for dumplings:
• Put the meat and ingredients in a bowl. Add one ounce of cold water, salt, sesame oil and white pepper to bowl. Stir in constant direction until all ingredients are combined. Add the rest of the ingredients and continue to stir in the same direction. Check cabbage and squishy dry into bowl. Add bamboo shoot as necessary. Once the bowl is complete, place one tablespoon of filling into the center of each circle. Water the edges of each circle and fold into half a moon shape. Pinch the edges together until you get a seal. Place in a large pot. Add about half of the water to the dumplings. Bring to a boil. Stir to make sure they don’t stick to each other. Then add half a cup of cold water. Cover and repeat three times. During the final time, take them out over the water bath. Enjoy!
**Winter Olympics**

Unscramble the words to reveal the clues. The first letter in each clue reveals the host country of the Winter Olympics. Each clue is either a sport, a province in the country, or a previous Olympic host city.

A Movie To “Shutter” At

New Movie Doesn’t Thrill All

Shutter Island is an unmitigated disaster. The story and central performance are so absurd and inexcusable, there is literally nothing that can save it from being entirely unimportant. Few films that have this level of incompetence are so unsalvageable.

People are aware of the film’s possible twist. Allow this reviewer to clarify: it is the most twisted, the most convoluted, the most sal饰able. An excellent twist enhances the experience of watching a movie. Fooling the audience takes special care and patience, and because we are dealing with the obvious. A random plot device is never betrays the audience.

Obviously, twists come in two distinct varieties: the random and the obvious. A random plot development without foreshadowing is unnatural and cheap. The audience, but never baiting them to look beyond the present. When the secret is finally unveiled, it ultimately betrays the audience. An excellent twist enhances the experience of watching a movie. Fooling the audience takes special care and patience, and because we are dealing with the obvious. A random plot device is never betrays the audience.

NEED HELP WITH TUITION COSTS?

APPLY NOW . . . for Montclair State University Alumni Association Scholarships!

The Montclair State University Alumni Association (MSUAA) offers scholarship opportunities to current, undergraduate students who will be entering their sophomore or junior year in September 2010. All awards are given in the form of tuition waivers and will be applied to the 2010-2011 academic year.

**MSUAA Scholarship Award** recognizes student(s) who have maintained high academic standards while actively involved in University and community activities. A cumulative GPA of 3.25 is required.

**MSUAA Service Award** recognizes student(s) who have achieved high levels of performance in service to the University and community, while maintaining strong academic proficiency.

**MSUAA Carpe Diem Award** acknowledges undergraduate student(s) who have had to overcome difficult circumstances and adversity during the pursuit of their academic goals.

**MSUAA Non-Traditional/Part-time Scholarship** recognizes part-time student(s) who have maintained high academic standards while actively involved in University and community activities. A cumulative GPA of 3.25 is required.

Deadline for all of the above mentioned applications is Monday, March 8, 2010

Applications are available on line at: http://www.montclair.edu/Alumni/services/scholarships.html

Completed applications must be delivered to:

MSU Alumni Association C/O The Office of Alumni & Community Relations, College Hall Room 301

The MSUAA supports the Affirmative Action/Equal Opportunity policy of the University.

These awards are made to students based on merit, regardless of race, creed, sex or national origin.
The first exhibition to explore the artistic legacy of the Julius Rosenwald Fund, which awarded stipends to hundreds of African American artists, writers, and scholars from the late 1920s through the 1940s.

The show presents the artistic products of that support, featuring over 60 paintings, sculptures, and works on paper by Rosenwald Fellows. Organized by the Spertus Museum.

Related exhibitions: Exploring Identities: African American Works from the Collection and Martin Puryear Prints; Selections from the JPMorgan Chase Art Collection.

A Force for Change: African American Art and the Julius Rosenwald Fund

FEB. 7 – JULY 25, 2010

The exhibition was made possible by a generous grant from The Terra Foundation for American Art. It was also supported by the National Endowment for the Arts; The Righteous Persons Foundation; and The Judith Rothschild Foundation. The Spertus Museum and the Montclair Art Museum with major support from JPMorgan Chase.

MSU STUDENTS: Show this ad and receive half-price admission to the Museum. Valid through July 25, 2010. Must show student I.D. Not to be combined with any other offer. One person per ad.

Leonardo DiCaprio performs in the new thriller to hit the theaters, Shutter Island.
I was Tuesday night as the members of The Montclarion trekked across campus. Strong winds sent icy rain whipping across our faces as we struggled through slippery walkways.

The night advertised La Quinta as a step-up from the regular residence halls. Among the amenities offered: housekeeping services, a pool, jacuzzi and queen-size beds. That’s all fantastic, as long as you don’t mind dealing with the occasional stabbing, car break-in or armed robbery.

Residents have also complained about monotony in their rooms that have been left (occupied by mice) for several days. Clearly, these amenities are the main issue in this case.

Since the university started using La Quinta as a place to house transfer students three years ago, students have reported several cases of theft. Car windows have been broken into and electronic devices stolen in the parking lot.

When a stabbing at the hotel was reported two years ago, the university did not inform students on campus of the incident. Residents of the hotel were well aware of it, but apparently the administration felt it was unnecessary to inform those who were not directly affected.

Residential Education encourages RAs at La Quinta to bring the campus to their outsourced domicile. They want Greek Life and other student organizations to hold events at the hotel.

This is reasonable, but only up to a point. Students pay to live away at college, in part, for the “college” campus atmosphere — not for the hotel experience.

One student who was interviewed to be an RA at La Quinta told Montclarion reporters, “Other universities outsource student housing. It’s not like living in a dormitory atmosphere — not for the hotel experience.

One student who was interviewed was an MSU Student. Snow Thanks, MSU. Snow Thanks. We hope that it won’t take an MSU Student to bring the hotel experience to our dormitories. The university does it for three semesters RAs at La Quinta to bring the campus to their outsourced domicile.

One of our main entrances is on campus. It doesn’t stop just because it snows. This is the Northeast; and it snows every winter. If everything were to close every time it snowed, then the world would come to a standstill. The university can’t handle a snowstorm.

This is the Northeast; and it snows every winter. If everything were to close every time it snowed, then the world would come to a standstill. The university can’t handle a snowstorm.

This is the Northeast; and it snows every winter. If everything were to close every time it snowed, then the world would come to a standstill. The university can’t handle a snowstorm. Students and staff had such a tough time walking across campus, we can’t begin to imagine the driving conditions.

One of our main entrances is even保证金 located on an uphill, winding road. Huge metal vehicles and sheets of ice don’t equate to safety; this seems obvious to everyone but Montclair itself. They are is putting their students at risk by not keeping the university open. We’re last count of how many commuters and students could make the decision to walk to campus and like the idea of hav...
**Budget Cuts Will Derail Current Prices for NJ Transit Trains and Buses**

Many other students and professors at MSU use the train, either for the daily commutes or the occasional trip. Now, public transportation probably won’t become any more expensive than driving, maintaining, fueling and sometimes parking a car daily. However, this price hike is still going to affect those who take public transportation for financial reasons.

The only way this could possibly be changed in the future is if ridership greatly increases for NJ Transit, as declining ridership was cited as one of the reasons for this charging the fare up. However, given the attachment most people have to their cars, an increase in ridership for public transportation seems unlikely. Fares for any increase will have to suffer.

Gov. Christie’s decision to cut the budget of a valuable resource for people who need help financially does not seem to make a lot of sense, unless you consider that this group is a smaller one to offend. If New Jersey were to raise tolls on the turnpike or parkway or raise the tax on gas, there would be more public outcry to suffer.

People are programmed, they are programmed that they can only learn from a teacher or in a university. They are programmed to need a government. Some anarchists feel that violence or criminality exists because a government is in place.

Some anarchists today believe there is a need for authority in the form of experts in an anarchist state.

For example, there would be an expert translator or farmer. This is because not everyone in the community may be capable of speaking Dutch or of growing soybeans appropriately. They started WWI by assassinating the 25th president, William McKinley, in 1901. Anarchist named Leon Czolgosz killed our 25th president, William McKinley, in 1901. Anarchists did not just talk the talk, they walked the walk.

Today, the movement is more of a philosophy existing without plans to murder our neighbors. Some anarchists today believe there is a need for authority in the form of experts in an anarchist state.

**Student Asks, “How Green are We, MSU?”**

The Lights are On, but No One’s Home in Buildings Across Campus

A
time
surgestoward
ourunderstanding
of this world
we live
in.

Contrary
to primitive
beliefs, the
earth is not
impervious.
Our mere
existence is
eresponsible
for massive
amounts of
damage to the
atmosphere.
The Industrial Revolution played a major
role in this destruction. You can easily
fight for environmental
protection.

From
industrial
companies
to residential homes, every institu-
tion should be actively participating in
the fight for environmental
protection.

Merely changing the light bulbs in your
home to fluorescent drastically reduc-
es green house gases and even reduces your
energy costs. It really is the little things that
count the most.

Consider for a moment the benefits of
turning off all the lights in your house before
going to sleep. If you had left those lights on
that Montclair is practically burning our
planet.

By leaving the lights on at night, Montclair is participating in
wasteful spending ...

“The lights are on, but no one’s home.”

Lori Wieczorek, an English major, is in her first year
as assistant opinion editor of The Montclarion.

Should They Stay or Should They Go: NHL Players in the Olympics

Mike Monostra
Assistant Sports Editor

This past Sunday night, Americans from coast to coast erupted with cheers from their living rooms. It wasn’t because of Lindsay Vonn, or Apolo Anton-Olbono, but rather from athletes who get paid millions, the USA Men’s Hockey team.

The United States men’s victory over Canada in pool play was the first over their neighbors in the Olympics since 1960. This huge upset also came almost 30 years to the day when the U.S. defeated the vaunted Soviet Union in the 1980 Olympics at Lake Placid. However, there was one big difference with the 1980 team, they were all amateurs.

The NHL began sending players to the Olympics in 1998 at Nagano, but is beginning to reconsider the policy for the next Winter Olympics, set for 2014 in Sochi, Russia. There are obvious issues with sending players to the Olympics, including the risk of injury, as well as the two-week break in the NHL schedule that makes for a crammed late-season slate of games for teams. Ultimately, the decision is going to come down to money, as NHL Commissioner Gary Bettman will look to see if sending players to the Olympics works economically for the league.

If NHL players are pulled from the Olympics, it will be a serious detriment to the men’s hockey tournament. Unlike Olympic basketball, which is dominated by the United States every tournament, hockey is a more global sport and six of the 12 teams in this year’s tournament had a realistic chance to win the gold medal.

In addition, the talent level of the players in the tournament is so deep. This is clearly the most talented pool of players to date. It also brings marketable players to the table. Recognizable names such as Sidney Crosby for Canada, Alex Ovechkin for Russia, Henrik Lundqvist for Sweden and Zach Parise for Team USA draw viewers to the television.

While it was nice to see a team of amateur players from the U.S. beat a team of Soviet pros players, how many players from that team can be named?

With the next Winter Olympics to be held in hockey hotbed Russia, the NHL should do everyone a favor and keep allowing their players to take part in the Olympics Games. The players want to be there, the fans love to watch them and it helps market star players just in time for the NHL season’s home stretch for after the Olympics. So to Gary Bettman and all the NHL executives across North America, don’t mess with something that is working. Keep the Olympic policy as is.

Kara Burnham Graduates as Rare Two Sport Athlete
Versatility and Love of Sports Sets Burnham Apart in MSU History

Robert Aitken
production Editor

The National Anthem plays at the Panzer Athletic Center. Teammates stand in a line while spectators hover over their seats. As the song is about to end, a pair of hands attempt to come together. It is a good chance that those hands belong to Kara Burnham, who has the act as a tradition before every game. Aware of it, Burnham’s teammates attempt to clap earlier than her.

“They do it to get me mad,” Burnham said.

Burnham, a senior broadcasting major, is a two-sport athlete, playing volleyball in the fall and basketball in the spring. Burnham is one of only three current MSU athletes to participate in two sports; the others are sophomore Christina Cressin, who does swimming and lacrosse, and junior Taylor Bonner, who plays football and lacrosse.

Burnham, a Moorestown native, played a third sport in high school: golf. When she began attending Montclair State, golf dropped off her already full plate. Juggling two varsity sports was a difficult task to get used to since all varsity sports train year-round for the season. Burnham would typically miss the very beginning of basketball season as she transitioned from volleyball to basketball. “[Coach Karin Harvey] was very understanding and would not give me a hard time while I adjusted back into basketball,” Burnham said.

Burnham’s most defining time in college came in her sophomore year. That fall, Burnham helped lead the Red Hawks volleyball team to their first NJAC championship and first ever appearance in the NCAA tournament. The Red Hawks had to defeat Stockton, a rival in volleyball, before upsetting top-seeded New Jersey City in the finals.

“They do it as a playing experience,” Burnham said. “The men’s soccer team also won [the NJAC championship] in Jersey City earlier that day. We passed by them on our way to the gym.”

Burnham’s performance for her team earned her honors as the NJAC Sophomore Female Athlete of the Year. What may be more surprising about Burnham was her season in basketball that year — Burnham didn’t play. Feeling the burden from her freshman year, Burnham did not play her sophomore season. “I helped out by filming some games for them,” Burnham said. “While I was doing that, though, I realized how much I missed it.” Burnham looks back on the missed season as her biggest regret in her four-year career.

The competitive Burnham admits that she has a short fuse and can easily lose patience. “One thing I have learned here is that there is no time to be nervous or get frustrated,” Burnham said. “It’s all about believing in what you can do and working hard for 40 minutes.”

Burnham had more individual success in volleyball, earning first team all-NJAC honors in 2007 and 2009, while earning an honorable mention all-NJAC selection in 2008. Burnham finished her career as the fourth player in team history with 1,000 career kills (1,035), third all-time in blocks (273), and the record for total blocks (273). All in all, Burnham’s name appears in the volleyball record books a total of 22 times in single game, single season and career rankings.

While not having the same individual impact in basketball, Burnham was a great role player off the bench for the Red Hawks.

Burnham started what will likely be her final game as a Red Hawk on Tuesday against Kean in the NJAC tournament semifinals, scoring seven points and grabbing seven rebounds.

Now that her four years of athletics at MSU are finished, Burnham says she is unsure what she will do now. “I only have classes two days a week. I’ll have to find something to do.”

Burnham hopes to attend Temple University for a graduate degree in broadcasting. She doesn’t predict becoming a coach at any point, citing that her fiery competitiveness may get the best of her.

With a varied playing history, the legacy that Burnham leaves behind at Montclair State is an uncertain one. Will she be seen as a volleyball player who also played basketball or vice versa? When asked, Burnham simply replied, “depends on who you ask.”

Kara Burnham, in action here in an early season game against Scranton, shot 39 percent and averaged 2.9 points per game in her senior season.

Men’s Lacrosse Dominates Moravian

Red Hawks Start Season on High Note, Expected to Take Conference

Robert Aiden
PRODUCTION EDITOR

It may be a new season for the Montclair State men’s lacrosse team, but last year’s success is proof that the team is capable of anything.

On Saturday, the Men’s Lacrosse team (1-0) now hits the road for their first of three straight road contests. The team returns to Sprague Field on March 15 for, potentially, their toughest early season test against nationally ranked Wesleyan.

"It is always exciting to play any of the teams in the top twenty," said Meth. "We can’t look too far ahead, though. We just have to take it one game at a time and we will meet them when we are supposed to."
By Ericson

MSU's basketball season will come to a conclusion with the New Jersey Athletic Conference Metro Championships this Saturday and Sunday.

Women’s Basketball

The Red Hawks will host a first round game on Saturday, February 20 against Juniata College. The winner will advance to the second round game against Montclair State on Sunday, February 21 at 12 p.m. in the Armory. The Red Hawks are the top seed in the NJAC tournament and have guaranteed a spot in the NJAC Championships on March 6, where the winner will be determined.

Men’s Basketball

The Red Hawks will host a first round game on Sunday, February 21 against Juniata College. The winner will advance to the second round game against Montclair State on Monday, February 22 at 7 p.m. in the Armory. The Red Hawks are the top seed in the NJAC tournament and have guaranteed a spot in the NJAC Championships on March 6, where the winner will be determined.

Swimming & Diving

The Red Hawks will host a first round game on Saturday, February 20 against Juniata College. WHO'S HOT THIS WEEK

Kisandra Ayenbuk

Forward — Women’s Basketball

Ayenbuk had 17 points and 10 rebounds in MSU’s loss against Keen in the NJAC Semifinals last Tuesday.

Jamie Ericson

Forward — Women’s Basketball

Ericson scored a career high 28 points and grabbed 11 rebounds in the Red Hawks’ 80-70 win over Richard Stockton in the first round of the NJAC Tournament.

Morgan MacPhee

Midfielder — Women’s Lacrosse

MacPhee scored four times in the Red Hawks season opening 8-7 loss at York on Saturday.

Eugene Asimou

Thrower — Men’s Track and Field

Asimou was named the Outstanding Male Athlete of the NJAC Championships as he won both the shot put and weight throw competitions on Saturday.

Red Hawks Fall to Kean After Knocking Out Stockton in Round One

Kara Burnham
Assistant Sports Editor

Montclair State University’s women basketball team NJAC playoff journey ended on Tuesday. After beating Richard Stockton 80-70 on Saturday afternoon in the first round in the NJAC tournament, the Red Hawks fell 98-68 to the number two ranked Kean Cougars on Saturday.

On Saturday, the Red Hawks maintained the lead the entire game, despite Stockton’s constant efforts to make a comeback.

The crowd was on the Red Hawks seven minutes into the second half when Stockton threatened MSU’s lead, coming just three points away from tying the game at 54-51. However, the Red Hawks returned the pressure hitting back-to-back three pointers by Jaime Ericson and Kassandra Anaya.

Sophomore Red Hawk guard, Ericson dominated the court, scoring 28 points with 13 rebounds.

“Normally when someone has hot hands on the team, we look to give them the ball more,” said Ericson. “Once I had a good shooting streak, the team looked for me more in the second half.”

Ericson said. “We turn athletes into icons,” Woods saga.

“Outside of a criminal act or death,” said panelist Ian Nelson DePasquale, a broadcasting professor here at Montclair.

The panel covered everything from the media coverage, to Woods’ eventual return. The panel covered everything from the media coverage, to Woods’ eventual return.

The most recent Sports Ethics Panel held at the Vogl Beer Museum and Learning Center on campus yesterday, streamed from the usual commentary on Tiger Woods. It took a closer, more in-depth and broader look on Woods’ situation.

Hosted by Marc Rosenwig, a broadcasting professor here at Montclair, the panel consisted of three people who are perhaps the most qualified to comment on the Woods controversy.

T.J. Quinn is a reporter for ESPN’s enterprise/investigation unit. In the past, Quinn has focused on performance-enhancing drugs in sports. He was a sports reporter for the New York Daily News and is a voter for baseball’s Hall of Fame.

Larry Londino is the chair of the media department for Montclair State University and is the author of Tiger Woods: A Biography. Londino has been closely following Woods since 1987.

Ivan O’Connor is a columnist for The Record and wrote Anatomy & Article: Phil, Mick, Nicklaus and Golfs Greatest Rivalry. O’Connor also hosts his own show on ESPN Radio.

The panel covered everything from the media coverage, to Woods’ eventual return.

Some of the most riveting discussions came from talking about the media’s response to Woods’ downfall.

For the past few months, almost every newspaper and magazine, news program and sports talk show has broken down every monitory on the scandal. The coverage has been so out of hand, even now, it goes to the point where one turn’s on their TV and ask themselves, why Tiger?

“I think [the coverage] has been excessive,” said O’Connor, “But Tiger Woods isn’t just golfer on an athlete. He’s one of the five or most recognizable people in the world.”

“He is the first billionaire athlete,” said Londino. “He goes beyond a sports story.”

These were just a few of the comments about why the world is so obsessed with the Tiger Woods saga.

Woods is often referred to as the “Babe Ruth” of his time. Before this scandal, he could do no wrong. Woods did what he did best: winning tournaments. After winning 14 major golf championships and 71 PGA tour events, Woods’s arrogant was the event that finally showed the public his tragic flaw. He isn’t invincible after all.

Woods confronted his humiliations this past Friday when he spoke to the media for the first time about his sex scandal. The fact that he wanted so long to make statement and his choice to not take any questions seemed to support that.

“If he rebuilt the Budawis foundation, took out alcohol ads, or released a book about the sex scandal and apologized to the kids who identified him before he apologized to the business partners, it would have been a perfect apology,” said O’Connor.

Not saying someone is lying, O’Connor explained in the panel, Woods let the story get out of his control.

“Woods didn’t say any-
